

SUSTAINABILITY RANGE

CLAD

WORKWEAR & PPE SPECIALISTS

From bottle to thread

Reducing landfill with sustainable workwear

Workwear made from recycled materials doesn't have to compromise on appearance or functionality. Clad Safety have been working closely with a number of our suppliers to develop a range of workwear, footwear and PPE that is sustainable while also smart, functional and most importantly, safe.

We are very aware of the global impact of clothing and fast fashion on the environment. In recent years the process of recycling plastic has developed in such a way that plastic bottles can now be melted and turned into chips. These chips become fibres that are transformed into clothing, in particular, high visibility workwear.

Other methods of producing recycled products include making a 100% recycled nylon frame for safety glasses from fishing nets.

Bamboo is also becoming a popular choice to create hi vis clothing. It is sustainable, comfortable to wear and is naturally anti-microbial.

National Hard Hat Recycling Scheme

Each year the UK throws away millions of hard hats. These are traditionally thrown into general recycling waste with a high probability of ending up in land fill. The National Hard Hat Recycling Scheme aims to change by diverting safety helmets into a dedicated waste processing facility, thereby ensuring all hard hat waste is fully recycled.

If you would like to know more about Clad Safety's sustainability range or discuss your requirements for recycled products, please get in touch.
